

Serial No. 09/881,258
Attorney Docket No. RESP:103aUS
Reply to Office Action of November 17, 2003

Amendment to the Specification

Please amend the specification as follows:

[0081] Figures 2 and 3 show the adjustment features of sink fixture 40. In Figure 2, sink fixture 40 is shown moving horizontally on rails 20 and 24. In Figure 3, the sink unit 90 is moved vertically with respect to the fixture base 92. Unit 90 can be adjusted in height when the securing bolt 80 is loosened, as is illustrated in Figures 12 and 13. Sink fixture 40 and consequently the sink integrated into sink fixture 40 is maintained at an unchangeable distance from wall by supporting rails 20 and 24. By unchangeable is meant that once sink fixture 40 and its integrated sink are placed on at least one support rail, the distance of the sink fixture 40 and its integrated sink cannot be changed without being removed from its support rail.
